PROFESSIONAL SUMMARY

I am a senior technical writer and courseware developer who specializes in 5G, LTE, and private wireless networks. I write both halves of the product story: the technical documentation that network administrators and engineers depend on, and the white papers, blogs, and training that show customers and sales teams why the technology matters.

I hold a B.E. in Computer Science and Engineering and began my career as a programmer analyst, so I read the architecture, not just the spec sheet. I test what I document, whether that means logging in to live customer networks remotely, setting up hardware at home to run it myself, or operating surgical instruments on the da Vinci robotic system. Across 8+ years at four private-network companies and Intuitive Surgical, I have usually been the only writer on the team, owning research, SME interviews, testing, writing, templates, and release delivery.

CORE EXPERTISE

Wireless & networking: 5G Standalone and Non-Standalone, LTE, O-RAN, CBRS private LTE/5G, neutral host multi-operator networks, small cells, 5G core and PDU sessions, RAN handover and power control, PTP/GPS timing, eSIM and SIM lifecycle management, Wi-Fi, LAA, NR-U, mmWave

Enterprise integrations: HPE Aruba ClearPass, Cisco ISE, Okta, Microsoft Azure

Deliverables: user, installation, configuration, and troubleshooting guides; release documentation; datasheets; white papers; solution briefs; case studies; blogs; training courses; UX copy; FCC comments

Tools: Oxygen XML Editor, Markdown, Git/GitHub, Jekyll, Confluence, Quip, Figma, Visio, Lucidchart, draw.io, LaTeX, HTML/CSS, Microsoft Office, AI writing assistants (Claude)

Technical foundation: Linux, Python, C/C++/C#, Java, JavaScript, MySQL, ASP.NET

EDUCATION & CERTIFICATION

B.E., Computer Science and Engineering, Anna University, Chennai, India (2015)

Certificate, Introduction to Technical Writing for Industry, University of Wisconsin–Eau Claire (2021)

Member, Computer Society of India (CSI)

PROFESSIONAL EXPERIENCE

Askey Computer Corp. | Fremont, CA | Aug 2026 – Present

Senior Technical Writer (Contract, part-time, remote)

- Author white papers that position Askey's end-to-end private 5G solution for specific enterprise verticals: warehousing, smart manufacturing, oil and gas, and hospitals.
- Create blog articles that introduce private 5G to U.S. enterprise buyers, a market where the technology is still new.
- Produce installation, configuration, and user guides, as well as hardware datasheets, for Askey's private 5G equipment [small cells, CPEs, and 5G dongles].

Intuitive Surgical | Sunnyvale, CA | Oct 2023 – Dec 2025

Technical Writer (Contract, part-time, remote)

- Tested the SureForm 45 and SureForm 60 stapling instruments hands-on on the da Vinci robotic surgery system to ensure the documentation matched how the instruments actually behave.
- Coordinated input from engineering, marketing, and other departments into documents shared across the organization. This resulted in saving \$1.1 M worth of parts from going to scrap.
- Wrote justification documents that provided executives with the technical evidence and root-cause details they needed to approve design and material changes.
- Built reusable templates from scratch for white papers, justifications, presentations, technical reports, and change forms, used by many teams within the stapling department.
- Structured and wrote engineering change orders, work instructions, technical reports, and archival records in collaboration with Advanced Instruments mechanical design engineers.

Celona | Campbell, CA | Sep 2024 – Mar 2025

Technical Writer (Contract, part-time, remote)

- Wrote the PTP (GPS) timing guide for 5G SA private networks. On my own initiative, I researched the legacy NTP protocol so the guide could explain why customers had to buy PTP; it became one of the most visited customer documents and gave sales a clear answer to a recurring pre-purchase question.
- Documented Orion, the AI-driven network health feature in Celona Orchestrator, for a flagship product launch. Orion runs automated daily health checks on every access point, flags problems before they cause outages, and tracks network events and KPIs; I validated each workflow by logging in to live customer deployments remotely.
- Wrote integration guides connecting Celona's private network to enterprise security and identity systems: HPE Aruba ClearPass, Cisco ISE, Okta, Microsoft Azure, and audit trails.
- Wrote the private network configuration guide covering software upgrades, eSIM activation, SIM lifecycle management, and static IP addressing on 5G small cells.
- Wrote 5G reference documentation on core network procedures (PDU sessions, small-cell-to-5G SA core connection), RAN behavior (inter- and intra-frequency handovers, power control), and UE performance metrics (latency, throughput, packet drop).
- Delivered customer-facing documentation for three software releases and audited the documentation repository for accuracy and consistency; several articles are published on Celona's public documentation site under my name.

Ataya | Santa Clara, CA | Jan 2024 – Apr 2024

Technical Writer (Contract, part-time, remote)

- Developed white papers and solution briefs for private 5G use cases across parking lots, warehouses, supercenters, and logistics operations.
- Introduced Chorus, Ataya's all-in-one 5G SA private network with an edgeless cellular architecture, through a series of blog articles.
- Documented Chorus for customers and installers, including user manuals and installation guides.

Baicells Technologies | Texas | Jan 2022 – Jul 2023

Technical Writer (Full-time, remote)

- Owned customer documentation, training, and marketing content for Baicells' LTE and 5G NR product lines (CBRS, O-RAN, Standalone, and Non-Standalone) as the sole writer for 6 products across multiple software releases.
- Wrote user, installation, configuration, and troubleshooting guides and datasheets, testing each procedure on lab equipment through remote access before publishing.
- Developed training courses and materials for 20+ customers and the internal sales team. Covered the entire lifecycle from pilot to production of a private 5G network, with slides and documentation.
- Wrote case studies (oil and gas, utilities, universities, healthcare), white papers, technical bulletins, blogs, brochures, video scripts, and web content for sales and marketing.
- Reviewed engineering source material for new products to identify gaps in customer documentation and training prior to launch.
- Set and maintained a uniform writing style across documentation, training, and marketing content.

Independent Contract | Aug 2021 – Oct 2021

UX Writer / Technical Writer (Freelance)

- Wrote the on-screen copy for a website: instructions, menus, labels, alerts, landing pages, emails, and site documentation.
- Partnered with the UX designer to fit content to each new page design.

Independent Contract | Aug 2017 – Jan 2020

Technical Writer and Researcher (Freelance)

- Researched and wrote technical papers on LTE, 5G, and Wi-Fi for clients, submitted to IEEE, Elsevier, and Springer conferences and journals.
- Drafted comments and response letters to FCC Notices of Inquiry (NOIs) and Notices of Proposed Rulemaking (NPRMs) regarding FCC proposals.

Cognizant | Chennai, India | Aug 2015 – Jan 2017

Programmer Analyst (promoted from Programmer Analyst Trainee within one year)

- Gathered requirements from business teams and end users, translating them into features for Pearson's bookkeeping software.
- Developed an ASP.NET e-learning portal for the software and designed and maintained its MySQL digital library database.
- Mapped bookkeeping workflows in Visio and Lucidchart, identifying redundant steps to streamline the process.
